Isolation and characterization of new *Pseudomonas* aeuroginosa bacteriophage

 [ziad alkhozai](#) 5.149.103.147 [over 9 years ago](#)

Hi

We isolated an five types of phages that infecting *Pseudomonas* spp, one of them was non tailed virus, small particle 55-70 nm, DNA nucleic acid .and had many other replicative aspects which are not like any other *Pseudomonas* phages which belong to the caudoviruses.
